

CCG (SCOTLAND) LTD GENDER PAY REPORT

MAR '18 - MAR '19

BUILDING FUTURES

We are an employer required by law to carry out Gender Pay Reporting under the Equality Act 2010 (Gender Pay Gap Information) Regulations 2017.

Gender pay gap reporting identifies the differences between the average pay between male and female employees within the company.

Gender pay gap is not the same equal pay which addresses the pay differences between male and female employees who do the same jobs within the company.

The legislation requires disclosure of the following indicators:

- The mean gender pay gap is the difference in the mean pay of full pay male and female employees expressed as a % of the mean pay of the full pay male employee
- The median gender pay gap is the difference in the median pay of full pay male and female employees expressed as a % of the median pay of the full pay male employees
- The mean gender bonus gap is the difference in the mean bonus pay of male and female employees expressed as a % of the mean bonus pay of the male employees
- The median gender bonus gap is the difference in the median bonus pay of male and female employees expressed as a % of the median bonus pay of the male employees
- The proportion of male and female employees who receive bonus pay
- The proportion of full pay male and female employees in each of four quartile bands

The mean pay is the average pay calculated by totalling the hourly pay for each employee and dividing it by the number of employees.

The median pay is calculated by ranking the hourly pay of employees from largest to smallest and selecting the rate that is exactly in the middle of the range of employees hourly pay.

BUILDING FUTURES

The results for the company are:

- The mean gender pay gap is 13.2%
- The median gender pay gap is 22.0%
- The mean gender bonus gap is 78.9%
- The median gender bonus gap is 63.1%
- The proportion of male employees receiving bonus is 64.3% and the proportion of female employees receiving bonus is 82.2%

The reporting within the quartile bands is calculated by ranking the hourly pay of employees from largest to smallest and dividing the employees into four sections, each section having equal number of employees. For this calculation there were 370 (89.2%) male employees and 45 (10.8%) 40 female employees

The results show that that within:

- The lower quartile 86.4% of the employees are male and 13.6% are female
- The lower middle quartile 87.5% of the employees are male and 12.5% are female
- The upper middle quartile 91.3% of the employees are male and 8.7% are female
- The upper quartile 91.3% of the employees are male and 8.7% are female

We are encouraged to see positive movement in our figures from last year with the number of female employees in our business is incrementally increasing, including a near doubling of female employees in the upper quartile of the business to 8.7% over the last year.

BUILDING FUTURES

We do realise that encouraging females to enter the construction industry is a continuing battle and we will strive to create and foster a progressive working environment that is as attractive to women.
